(a) $Q_P(k) = \sum a_i b_i$: • roots of B_{28} ($\varepsilon = +1$), ∘ roots of $x^8 B_{28} + 1$; arrows: the transvection t_v, v a duad
(b) Frobenius $x \mapsto x^2$ (type 71): one fixed point and nine 7-cycles; 4 among the roots of B_{28}, 5 among the plus-type points
$a = (a_1 a_2 a_3)$
